github.com/arschles

AARON SCHLESINGER

Kubernetes/Cloud Native developer for 6+ years

Sr. Cloud Developer Advocate, Microsoft

KEDA RECAP

Powerful event-based scaling.

Doesn't support HTTP

WHY HTTP?

“App Developers” are moving to k8s.

 means HTTP apps.

Different developer experience (DX).

HTTP isn't a traditional "trigger."

PRODUCTION HTTP APPS

- Deployment
- Service
- Ingress / Routing
- Rollouts, A/B, blue/green, ...
- SSL?
- Autoscaling?
- Magic ?

THERE'S LOTS OF PRIOR ART

Heroku, etc...

KNative, etc...

PRINCIPLES

Invent very little

Assemble in a (semi) optionated way

Good UX for first-timers

Built to customize

DEMO

UX and a peek behind the curtain

PROJECT STATUS

Official repo: github.com/kedacore/http-add-on

Original prototype: github.com/osscda/kedahttp

Beta: ~end of this month (January 2021)

Q/A

Here's to a better 2021
