

KEDAHTTP

CONTRIBUTING.TODAY, JANUARY 4, 2021

[@arschles](#)

github.com/arschles

AARON SCHLESINGER

Kubernetes/Cloud Native developer for 6+ years

Sr. Cloud Developer Advocate, Microsoft

KEDA

Powerful event-based scaling.

Doesn't support incoming HTTP events.

WHY HTTP?

“App Developers” are moving to k8s.

This overwhelmingly means HTTP apps.

FOR PRODUCTION

- Deployment
- Service
- Ingress / Routing
- Rollouts, A/B, blue/green, ...
- SSL?
- Autoscaling?
- Magic?

THERE'S LOTS OF PRIOR ART

GOALS

Invent very little, add on to KEDA

Assemble in a (semi) opinionated way

Good UX for first-timers

Escape hatch for “day 2” teams

DEMO

UX and a peek behind the curtain

PROJECT STATUS

Official repo: github.com/kedacore/http-add-on

Original prototype: github.com/osscda/kedahttp

Beta: ~end of this month (January 2021)

Q/A

Here's to a better 2021
